BACHELOR OF SCIENCE IN COMPUTER SCIENCE

HONG KONG METROPOLITAN UNIVERSITY

Graduated in Aug 2026

KEY PROJECTS

GANGSTERSURVIVOR| 3D Survivor-like Game Project GITHUB

-  Role: Game resource collector, system & interface builder.
-  Duties: Implement the logic and interface for the weapons and shop systems.
Search and filter copyright-free 3D models & maps.
-  Problems: The interaction of state variables between some objects failed.
-  Solution: Learn how professional developers handle things online.
-  Learn: Learn the inheritance methods for state variables between objects.

BIT | Decentralized Game Asset & NFT Trading Platform GITHUB

-  Role: Programmer.
-  Duties: Implement the trading platform in Python Flask for assets listing or searching
Implement the JavaScript logic for interacting with MetaMask Crypto Wallet.
Implement the NFT contracts of the Game Asset in the platform.
-  Problems: The chain for testing purposes was too slow to demonstrate or test the project.
-  Solution: Deploy a fully initialized private chain and the contracts required for projects like USTD.
-  Learn: Web3 interaction logic, limitations, etc.
The importance of communication.
