GITHUB | LINKEDIN | PORTFOLIO

EDUCATION

HONG KONG METROPOLITAN UNIVERSITY
COMPUTER SCIENCE BACHELOR

China, Hong Kong

SKILLS

PROGRAMMING LANGUAGES	Python, Java Script, Solidity, Java
LIBRARIES/FRAMEWORKS	Gradio, FAISS, FastAPI, Flask, LangChain, PaddleOCR, Next.js
TOOLS / PLATFORMS	Git, VS Code, Android Studio, Unreal Engine, Docker
DATABASES	SQL, MongoDB

PROJECTS / OPEN-SOURCE

BIT | [LINK](#)

Solidity, JavaScript, Python (Flask)

Decentralized Game Asset & NFT Trading Platform (Graduation Project)

- Architected a Web3 marketplace facilitating direct peer-to-peer (P2P) on-chain interactions via client-side JavaScript, ensuring trustless execution without server mediation.
- Deployed custom smart contracts (ERC-721/1155) using IPFS for immutable metadata storage, securing user asset ownership independently of game server lifecycles.
- Built a Python Flask prototype server to demonstrate cross-platform game utility and sync asset validation.

WF-TRADEABLE-ITEMS-PRICE-CHECKER | [LINK](#)

Python, Win32 API, PaddleOCR

Real-time In-Game Utility & OCR Data Aggregator

- Developed a non-blocking asynchronous Windows desktop utility integrating Win32 API for active process monitoring, UI window injection, and event-driven automation.
- Implemented local OCR text extraction using PaddleOCR to scan game-screen regions dynamically without freezing or blocking the host process thread.

GANGSTER SURVIVOR | [LINK](#)

Unreal Engine (Visual Blueprint)

3D Survivor-like Game Project

- Programmed core gameplay loops, weapon progression trees, and shop subsystems entirely through scalable Unreal Blueprints, optimizing UI architecture to stabilize runtime FPS.
- Managed feature branches and resolved complex binary asset conflicts utilizing Git version control.

RAG | [LINK](#)

Python, LangChain, FAISS

Dynamic Document AI Engine

- Engineered a flexible RAG prototype enabling arbitrary raw document injection and dynamic text segmentation using LangChain pipelines over a local FAISS vector database.
Integrated the bce-embedding-base_v1 model for semantic search indexing, streaming contextual data into Large Language Models (LLMs) to enhance query accuracy.

EXPECTED SALARY: (\$20,000) NEGOTIABLE
